

ELECTRONIC PACKAGING

PVP ELECTRONIC PACKS

At Pine Valley Packaging Ltd., we create packaging products that effectively cushion your sensitive electronic products from shock and vibration during the shipping process. In order to ensure the safety of our product, our

engineers take all packaging criteria into consideration. We understand how costly it can be for you to replace damaged shipments and we create cost-effective, quality packaging products to prevent this from occurring.

Features and Related Benefits of PVP packs

Lightweight:

Easy to handle and reduces shipping costs.

Resilient:

Absorbs repeated impacts and cushions against shock and vibration.

Clean and Non-Abrasive:

Does not crumble or dust and will not scratch or mar painted surfaces.

Cost-effective:

A minimum amount of foam is required to provide superior protection for all your electronic packaging needs.

Low Cost Fabrication:

Foam packs are produced without the need for expensive tools. Conventional die cutting technology is used for both low and high volume production runs.

Moisture Resistant:

Polyethylene 'closed cell' composition will resist moisture absorption.

Our engineers use the following criteria to determine the right package to protect your products:

1. Determine the fragility of the product to be packaged.
2. Prototype the new pack design.
3. Define the method of distribution.
4. Calculate the product weight to determine drop height.
5. Calculate the density and cushion thickness required to provide adequate product protection.
6. Test the pack using certified testing methods.
