

AirfloPac Cushions

WHAT IT IS

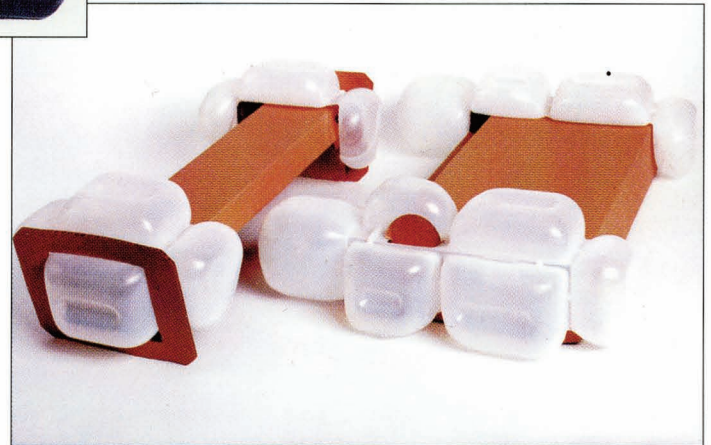

The AirfloPac™ is a patented, protective packaging technology conceived by Mr. Michael Clee, V.P. Design & Engineering at PINE VALLEY PACKAGING LTD. It utilizes captured air to disperse rather than absorb energy created by any impact.

AirfloPac™ cushions are multi-chambered, blow-molded parts which contain neutral air pressure.

HOW IT WORKS

Upon impact, air is compressed in one chamber, then transferred to the other chambers via a flow restricting tube or "Venturi". This compressed air acts as a shock absorber, decelerating the product and causing the AirfloPac™ to rebound to its original shape.
